

Evolution

The Next Step in Tracking Software

Combining best-in-class Tagging, Tracking and Locating (TTL) software, Evolution Command and Control Software adapts the ever-changing strategic, operational and tactical mission requirements into a single configurable platform that is easy to learn and use.

Evolution provides a full tracking surveillance solution through control of GPS devices, one-click plotting of live or historic track data on a single map surface, real-time notifications based on a range of target activities, correlation of tracks with external data, and advanced target routine analytics. The integrated platform enables all data to be collected in a single repository and can be accessed through a standard web browser.

With global mapping, user remote access, and a dynamic command and control capabilities, Evolution offers operational decision making capability base on captured data.

Supporting hundreds of devices from multiple manufacturers, Evolution is capable of seamlessly gathering audio, video and other tracking data streams all on one user configurable display. Evolution harnesses the power of DTC's UniTrac to command, control and track devices and sensors deployed in the mission arena.

At its core, Evolution provides a full tracking surveillance suite consisting of:

- Control of GPS and other devices from multiple vendors
- Plug in architecture allows third party applications
 - Data analytics
 - Tool kits
- Real-time notifications based on target activities
- Basic and advanced tracking analysis

Evolution's real time information and two way control capabilities provides operatives with secure and accurate situational awareness, and dynamic interaction with many remote devices and sensors.

Designed to make multi-vehicle tracking easier than ever, an integrated map-in-map feature enables multiple targets to be tracked in their own window, while Google Earth® and Google Streetview® provide additional location information and actual terrain analysis.

Evolution is the next level in Command and Control Software for mission critical data collection and coordination. Contact your DTC Sales Representative to schedule a demonstration.

Key Features

- Standard Maps (Map, Sat, Hybrid)
- Advanced Maps (Street View, Earth 3D View)
- Map-in-Map Display
- Map Search (Local, Address)
- Multi-Target Tracking [Map in Map]
- Google and Bing Integration
- Compatible with Mozilla Firefox, Microsoft Internet Explorer & Google Chrome
- Open Street Maps Integration
- WMS
- MGRS Support
- Track History Report
- Stops Report
- Vehicle Stop Reports (Date and Time)
- Historical activity (Including Historical Position Reports)
- Viewing History Trails of Vehicles With Playback
- Target/Case Management
- Active Directory Integration
- Simultaneous Device Tracking
- Points of Interest
- UniTrac Integration
- POI integration to Import and Share Historic Track Files
- Warrant Timer Tracking
- Legacy Software Interface for Current Users. Click to the Evolution Interface at any Time!
- Lower Training Time
- Flexible Hosted User Licensing with or without Air Time
 - Evolution, Software Only without Air Time
 - 1 Year (EVO-HS-1YUL) with Air Time
 - 3 Year (EVO-HS-3YUL) with Air Time
 - 5 Year (EVO-HS-5YUL) with Air Time
